PARK BRAKE WARNING SYSTEM

The Muirhead® Park Brake Warning system is a preventative action system that not only alerts the operator that the machine's park brake is not applied, but also alerts any personnel within the vicinity of the machine.

If the machine's door(s) is open, the system alerts the operator and personnel by means of an audible horn and visual alarm that the machine's park brake has not been applied. The system warns the operator, when exiting the cab, that the park brake has not been applied.

The system can be isolated by a key for maintenance purposes. A dash mounted LED warns the operator, while the machine's horn alerts nearby personnel. When the machine's battery isolator is turned on, the system runs through a test cycle.

FEATURES

- Simple design
- Customised circuitry
- Override switch
- Audible & visual warnings
- Self test mode
- Helps prevent unattended machine run away accidents
- Protects personnel working on & near machine
- Increases occupational safety
- User friendly
- Simple operation

APPLICATIONS

Trucks, Coal Haulers, Dozers, Graders, Scrapers.

Part No. 11386 | Park Brake Warning System
